

Gravity

By Ben , Jacob and Jayden

Gravity is the force
that pulls objects
down to Earth.

If it wasn't for sir
Isaac Newton, we
wouldn't have
know about gravity.

WHY???

WWEEEE!

Jupiter

GRAVITY

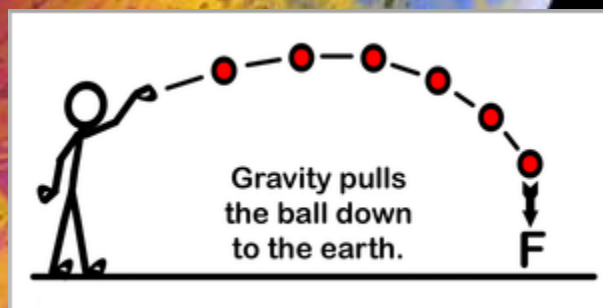

Pluto

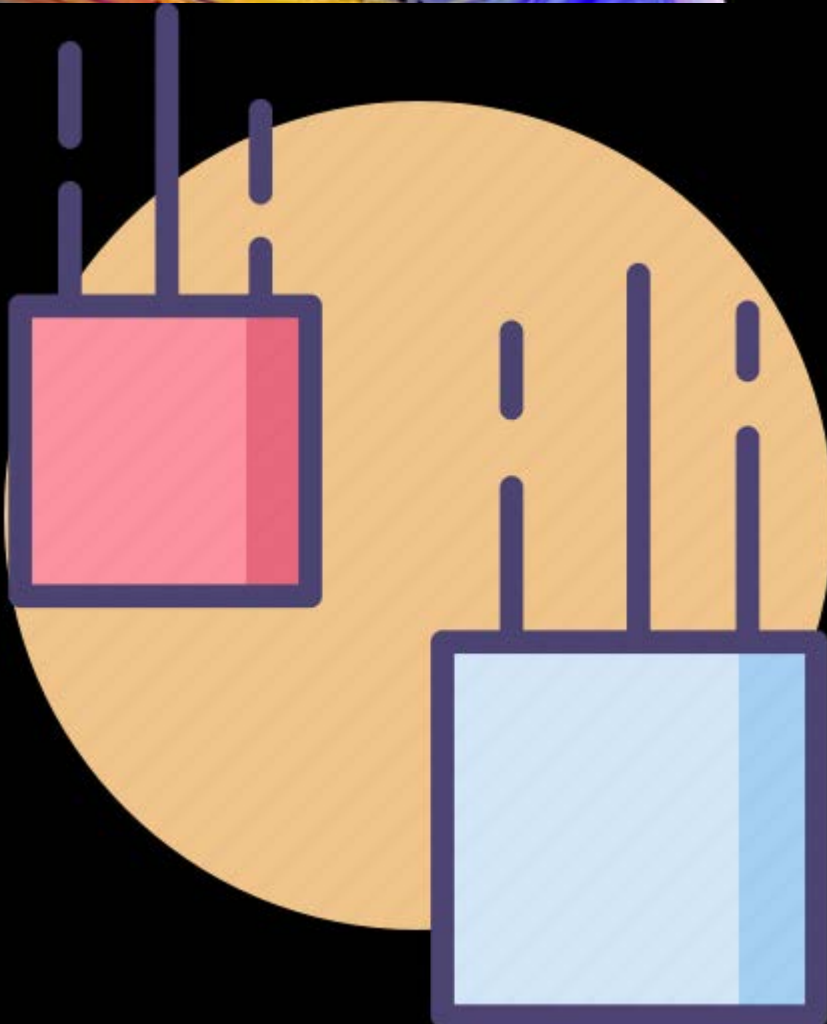

Without gravity, all things
on earth would go up to
space.

With gravity when
something goes up, it
always comes back down.

E.g. When you throw a
ball up it always comes
down.

The bigger the object
thrown up is, the
faster it falls down.

Big planets like Jupiter have a bigger gravity.

Gravity is also the force that keeps planets in orbit with the sun.

Thank you for
being a great
audience!!
